

VALIDOGEN's SERVICES

Expression Feasibility Studies

- Assessment of expression feasibility
- Selection of most suitable production strategy
- Preparation of product samples for assessment of protein properties

Production Strain Development

- Maximization of productivity & quality
- Exploitation of VALIDOGEN's entire protein production toolbox
- Combinatorial microscale cultivation and screening of several thousand clones

Bioreactor Cultivation Development

- Scalable, robust, transferable & CMC-ready manufacturing system
- Optimized VALIDOGEN cultivation protocols
- Comprehensive process development / characterization (e.g. DoE)

Protein Purification Development

- Rapid process setup & systematic purification process development
- Preparation of product samples tailored to individual specifications
- Analytical tools for target protein as well as product & process related impurities

Enzyme Engineering

- Enzyme engineering performed in final production host
- Advantage of VALIDOGEN's high-throughput microscale screening protocol
- Random and rational engineering strategies

Cell Banking

- Purity / viability / sequence confirmation
- Copy number determination
- Assessment of integration events and locus
